

Sustainability Statement

Bamboo-fusion massage therapy was developed in 2004 by founder, Nathalie Cecilia, originally from Nimes, south France. Since inception, different massage routines, workshops and tool sets have been created for use in delivering luxurious full body, chair, and facial massage. Our unique and exotic massage modality is favored by clients, therapists, and spas worldwide. The bamboo tools are not only beautiful, but are also easy on the therapists' hands and wrists, sustaining careers of those who specialize in both relaxation and deep tissue massage.

Our focus is producing top quality massage tools that are made from natural eco-friendly materials. The Bamboo-fusion tools have evolved over the past several years and our newest tools are made from 100% solid bamboo, which is very durable and made with all food-grade components. Our bamboo is a natural renewable resource which is harvested every three years and made into our custom designed tools of varying shapes and sizes to beautifully compliment your massage offering. The type of bamboo used to create our products is not preferred by pandas, so our product is panda safe.

All aspects of our massage products continue to be enhanced based on welcomed feedback from our valued and dedicated customers. We are the original resource for bamboo massage in the spa industry and have other new and exciting developments underway.

"Go green" with Bamboo-fusion and help save the planet!
